

LOVE DRAMA

Curriculum for Excellence Workshops

Eco-Schools Workshops: |Energy|What's the Buzz?

Content

It's time to find out about our energy! The participants will become energy scientists and will examine, explore and experiment in a session which looks at the who, where, what, when and why of hot energy issues. Using role play and active enquiry the participants will determine the energy usage and efficiency of their school. After their investigations the scientists will devise innovative ways to present their findings in order to suggest solutions, alterations and advances. These suggestions can then be taken forward and effectively deployed throughout the school in order to better understand, use and conserve energy.

Learning Level

Suitable for early, first and second stages with information and delivery adapted to the needs of your class.

Space

A space available for discussion, whilst also being able to travel around the school and its grounds.

Time

Second – 90 minutes

Additional Information

As with all of our workshops it is extremely important the class teacher stays with the group at all times. This ensures that the learning experiences and outcomes are shared and that our workshops contribute effectively to the development of each and every young person.

Love Drama prides itself on creating a bespoke service that meets the needs of its clients. Love Drama is flexible and responsive to individual requests and the dissemination of all workshops can be tailored to complement the outcomes and experiences you have included in your forward planning. You may choose to work with us in a one-off session, over four weeks or for the duration of a term, in order to create a learning experience that effectively supports all participants. If you have any queries regarding participation within these workshops, please do not hesitate to contact us.
