

LOVE DRAMA

Curriculum for Excellence Workshops

Science: | Forces, Electricity and Waves | Vibration and Waves

Content

Lights, Camera, Action!

Time for a trip to the movies!!! Become a star on the silver screen and explore how sound and light waves help us enjoy the magical movie experience. The pupils will explore how sound and light travels as waves, vibrating through the air. How do the waves we see on the beach relate to the waves of sound and light that we can't see? The pupils will create ways of explaining, describing and presenting how waves travel in order to understand the marvellous properties of sound and light.

Learning Level

Suitable for early, first and second stages with information and delivery adapted to the needs of your class.

Space

A large clear space, most suitable would be either a gym or assembly hall.

Time

Early/First – 60 minutes

Second – 90 minutes

Additional Information

As with all of our workshops it is extremely important the class teacher stays with the group at all times. This ensures that the learning experiences and outcomes are shared and that our workshops contribute effectively to the development of each and every young person.

Love Drama prides itself on creating a bespoke service that meets the needs of its clients. Love Drama is flexible and responsive to individual requests and the dissemination of all workshops can be tailored to complement the outcomes and experiences you have included in your forward planning. You may choose to work with us in a one-off session, over four weeks or for the duration of a term, in order to create a learning experience that effectively supports all participants. If you have any queries regarding participation within these workshops, please do not hesitate to contact us.
